

Lipson Cancer Institute

Offering hope: When you donate to Lipson Cancer Institute, you're making a frightening diagnosis easier to bear and easier to beat. You're taking away the stress of finding transportation to treatments. You're providing a relaxing and restorative space to receive infusions, and you're supporting talented medical teams that bring the best in cancer care to our friends and neighbors.

Providing access to life-saving technology: The Lipson Cancer Institute is a recognized leader in the treatment of cancer and blood disorders. In fact, we were the first – and are still the only one – in Western New York to use intraoperative radiation therapy. IORT is an intensive radiation treatment that targets a tumor during surgery while avoiding damage to surrounding tissue. For most patients, there are no return trips needed for radiation and patients experience fewer side effects.

Hiring topnotch medical professionals: Our oncology and hematology physicians are board certified in their specialties. They treat more than 4,500 new cancer and blood disorder patients each year – along with providing care for people at more than 45,000 outpatient visits.

Bringing cancer care close to home: Our Lipson Cancer Institute teams provide care across the Western and Central New York regions and in a variety of clinical settings, ranging from hospital inpatient care in Rochester to outpatient settings in communities further from the city. Our goal is to provide the latest in cancer care and the best possible outcomes in a way that is convenient and easy for each of our patients.

Approaching treatment differently: Each year, more than 250 of our patients participate in clinical trials. We employ the most up-to-date, innovative therapies and tap into the most promising research in cancer detection and diagnosis. This commitment to clinical innovation helps our patients enjoy higher success rates, fewer treatment-related side effects, and longer, healthier lives.

ROCHESTER REGIONAL HEALTH

“We’re committed to serving the whole person at Lipson Cancer Institute, and we’re committed to making sure every patient has the best shot at living life to the fullest.”

Pradyumna Phatak, MD
Chief, Medical Oncology and Hematology
